

# Ballistiseal Advanced

Take coatings to the next level with Ballistiseal Advanced. When it comes to porosity, BallistiX top coats (Black Label) will simply absorb into the surface, which is why **you** need Ballistiseal Advanced. Technically under the category of “pre-sealer,” Advanced is your one stop shop for creating a smooth surface ready for Black Label. Check it out:

- Apply to a porous surface to achieve a smooth finish ready for Black Label
- Examples of applicable porous surfaces include:
  - Concrete
  - VCT
  - Wood
  - And more...
- Recoat until the pores are filled (2-3 coats should do the trick)
- Can be diluted for:
  - Easier Installation
  - Further Spread Rate
  - Better Appearance
- Can be tinted:
  - Solid Color Appearance
  - Any Color
- Can be burnished/buffed:
  - Burnish with a hog’s hair
  - Buff with appropriate pad
  - Achieve a perfect finish
- Each coat dries super fast (30 minutes), apply next coat when dry
- Can be left as it’s own top coat, but is not resistant to chemicals, stains, and more...

Be the difference in the products you offer with this advanced technology. Take a polyester silane hybrid coating and apply to virtually any surface and then complete it with applying Black Label directly to it. These products are 2 peas in a pod.
